GEMS Workflows for Manager Review

Oct 15, 2026 · @Analyst

Eighteen workflows reconstructed from the live GEMS ERP, one diagram each, so managers can confirm or correct how G-TEC actually works before the new ERP is built.

How to read these workflows

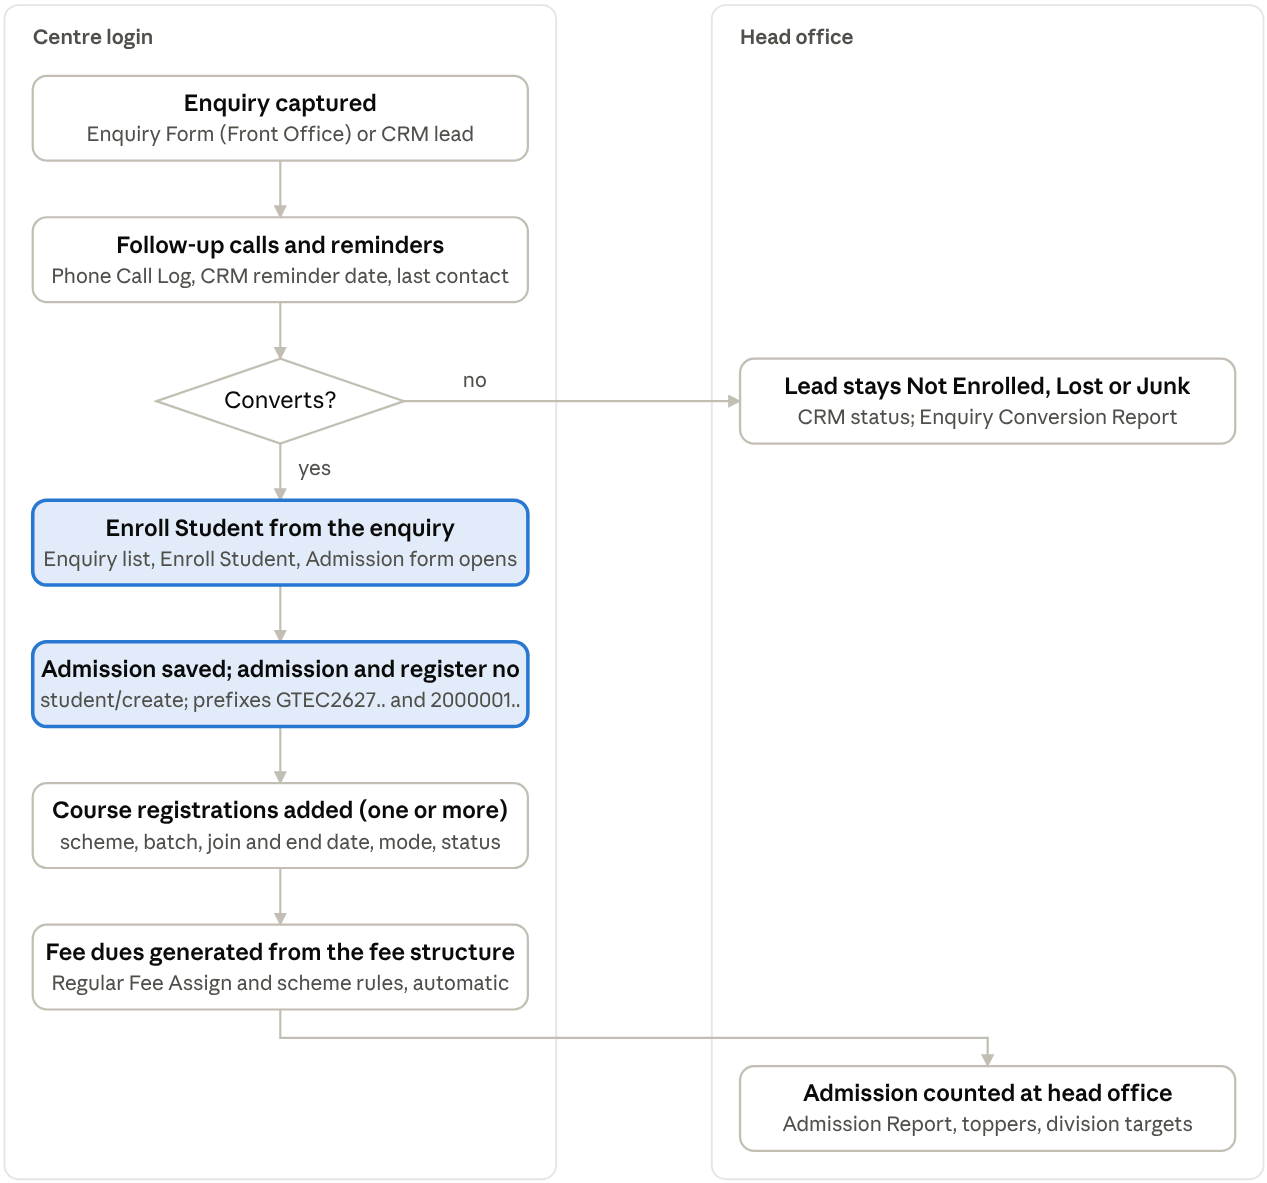

Each diagram has two lanes: the left lane is what a centre login does, the right lane is what head office (Super Admin, HO roles such as PRO, ASO, RSO, Certification, Accounts) does. Boxes are steps in order from top to bottom; the small grey line under a step names the GEMS page where it happens; blue boxes are the step that changes the student's or centre's state; diamonds are decisions. Under every diagram is a short list of questions. Managers should answer those questions, and mark anything in the picture that is not how the work is really done. The companion document, GEMS ERP Rebuild Specification, holds the field-level detail behind each page.

The flows were reconstructed from the Super Admin side of the live system. Steps marked "centre side, to confirm" were not visible from that login and are drawn from the page names and HO approval queues that exist for them.

1. Enquiry to admission

A lead enters through either the Front Office Enquiry Form inside GEMS or the separate CRM, is followed up, and is converted by the centre with "Enroll Student", which opens the Admission form pre-filled. Saving the admission allocates the admission number and register number from head-office prefixes, creates one course registration per chosen course, and generates fee dues automatically.

An enquiry becomes an admission only when the centre enrols it

enquiry to admission · 8 steps, 1 decision

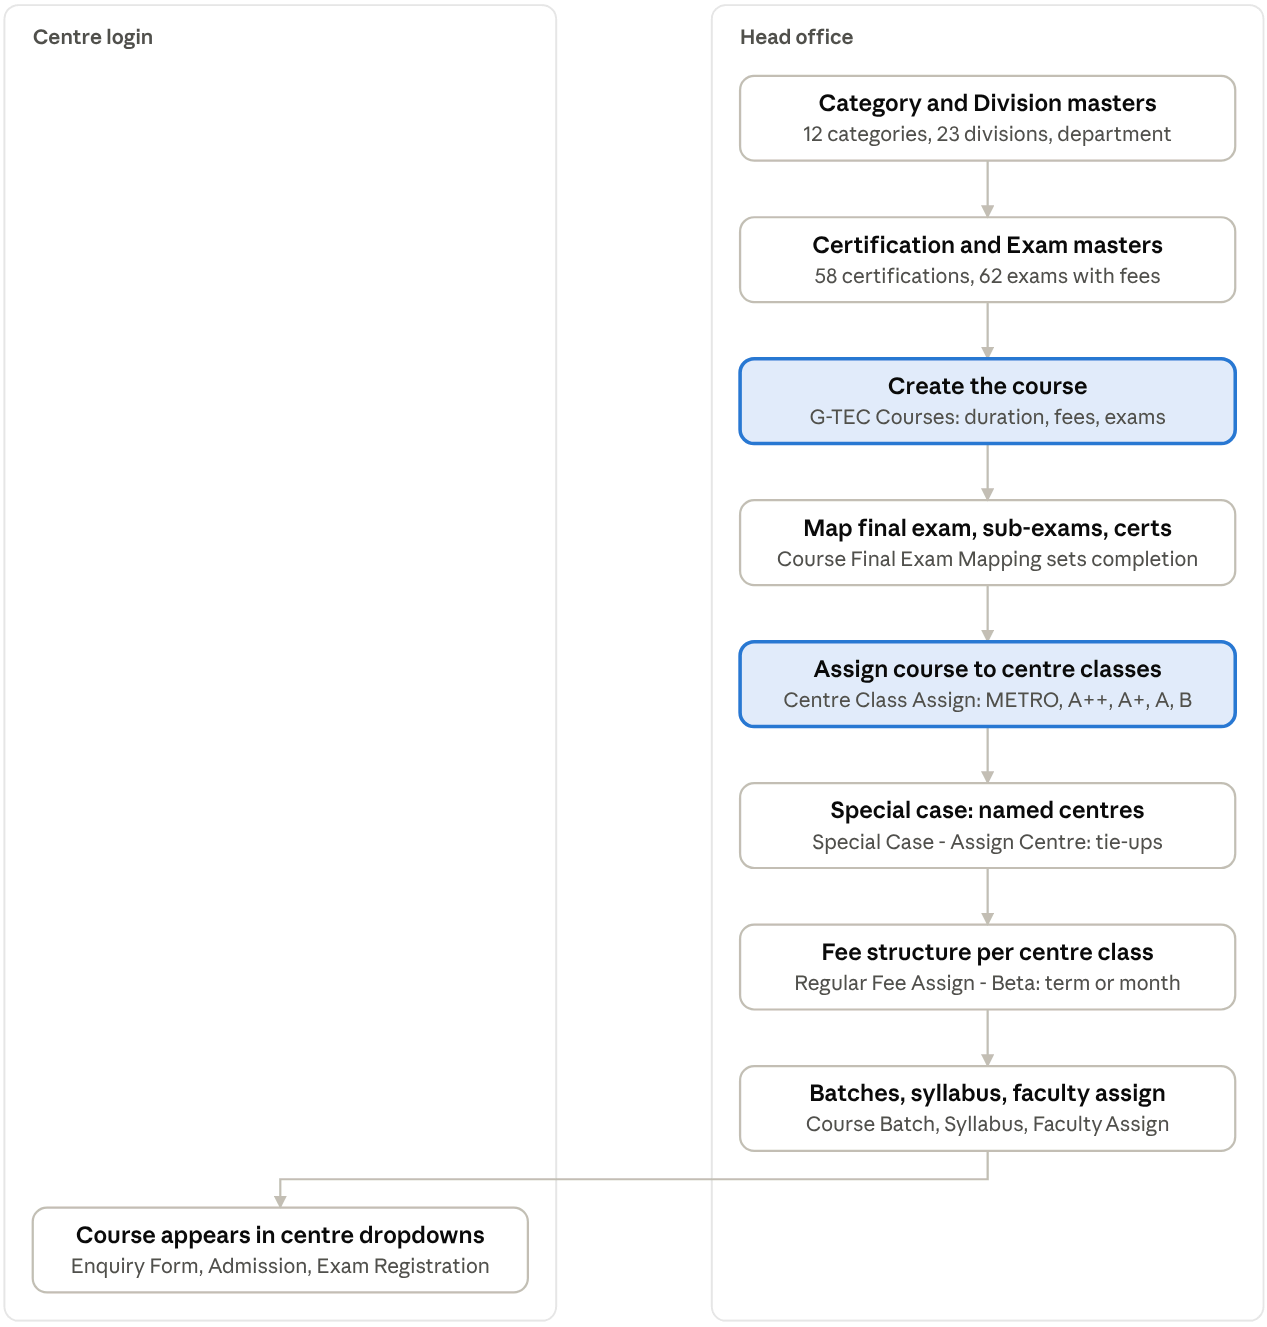

Questions for managers:

- [ ] Which system is the real source of leads today, the GEMS Enquiry Form, the CRM, or both? Should the new ERP keep one?
- [ ] Is an admission counted on save, or only once the registration fee is paid (the reports count it on registration fee paid)?
- [ ] Who may edit an admission after saving, and which fields need a correction ticket instead?

2. Course catalogue and centre availability

Head office owns the catalogue. A course is created once with its duration, fee heads, mandatory and optional certifications and exams, and the centre classes that may sell it; the final main exam mapped to it is what later marks a student as course-completed. Availability is by centre class tier, with a special-case page for tie-up and Keltron courses that only named centres may offer.

A course reaches a centre only after HO maps exams and assigns centre classes

course catalogue setup · 9 steps

Questions for managers:

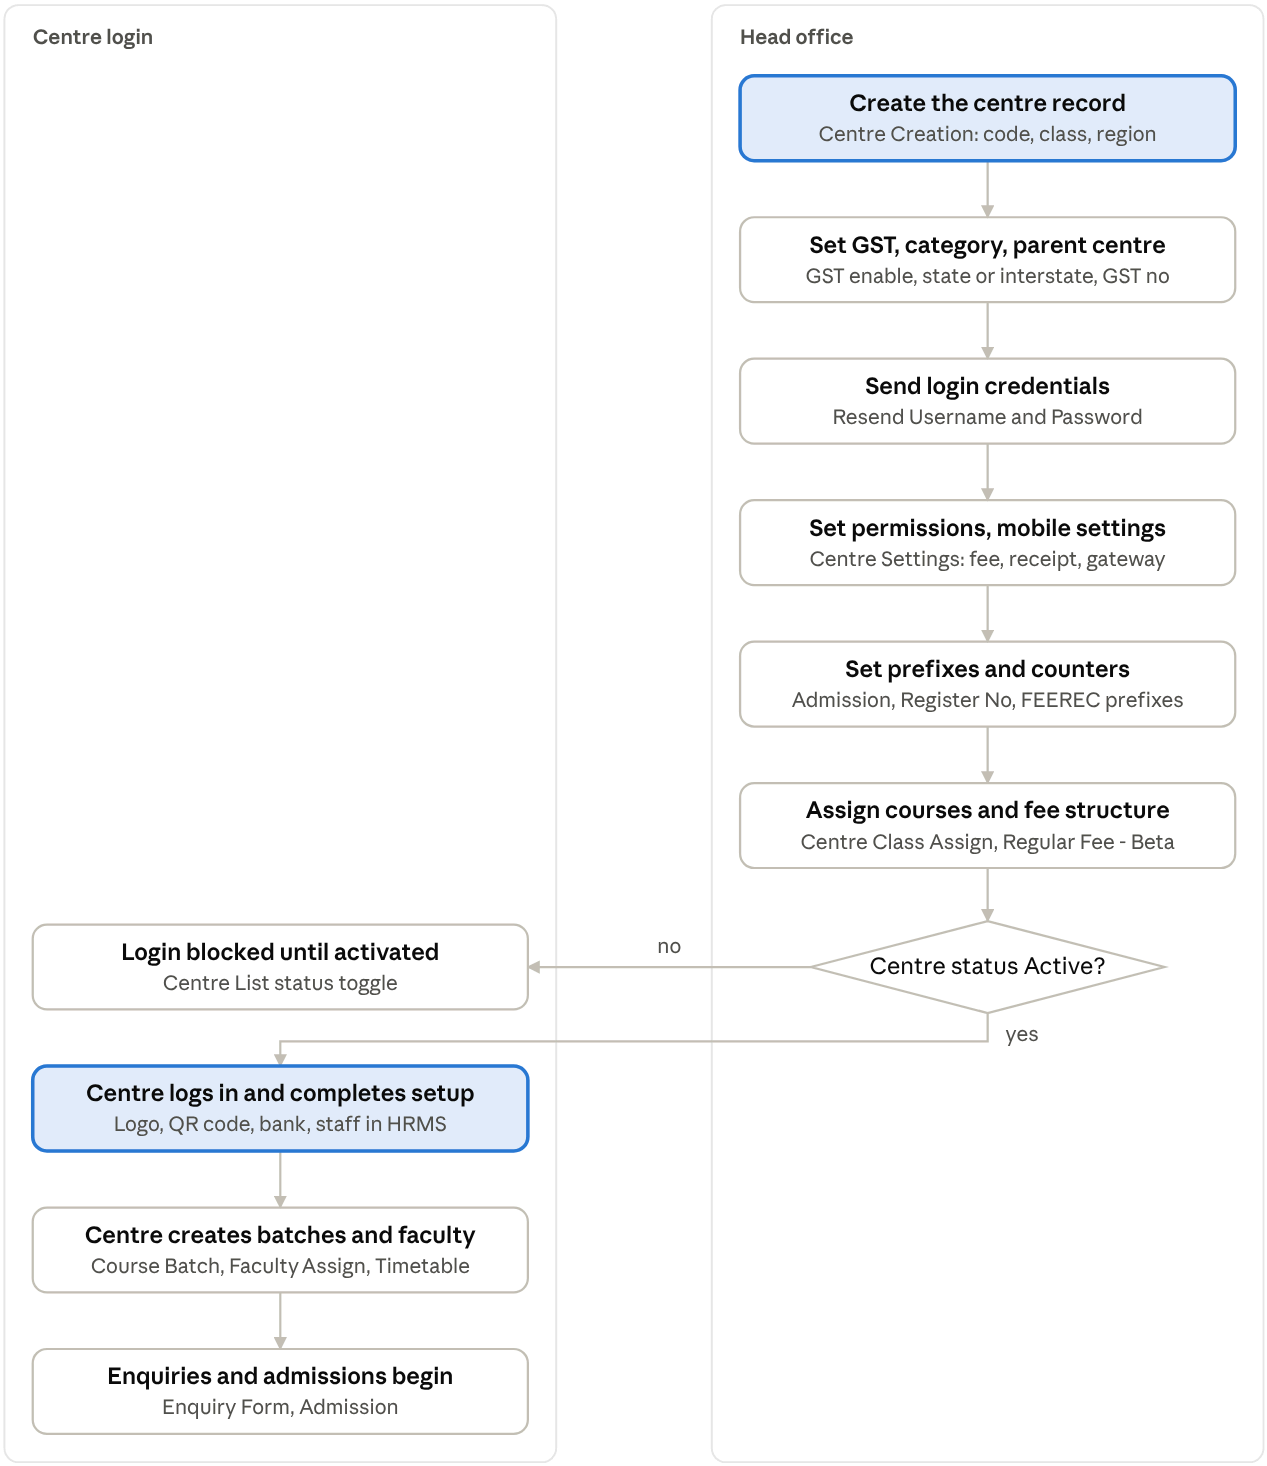

- [ ] Is centre class (METRO, A++, A+, A, B, C, GCE, GCAS, GENSMART, IT MAGIC, CALTEX, UAE, EGY, BAH, UK) still the right way to decide which centres can sell a course?
- [ ] Who approves a new course and its fee heads before it goes live, and is that approval recorded anywhere today?

- [ ] Do courses need versions (fee or syllabus changes by intake) rather than being edited in place?

3. Centre onboarding

A new franchise centre is created entirely by head office. The Centre Creation form fixes the centre code, class tier, region and area, which in turn decide which courses and fee structures the centre inherits. Login credentials are sent from the Centre List, permissions and payment gateway settings are set per centre, and the admission, register and receipt prefixes are created before the first student can be admitted. Only 2 of 327 centres have uploaded a payment QR code, so that step may be optional in practice.

A centre goes live only after HO creates it, sets permissions and prefixes

centre onboarding · 9 steps, 1 decision

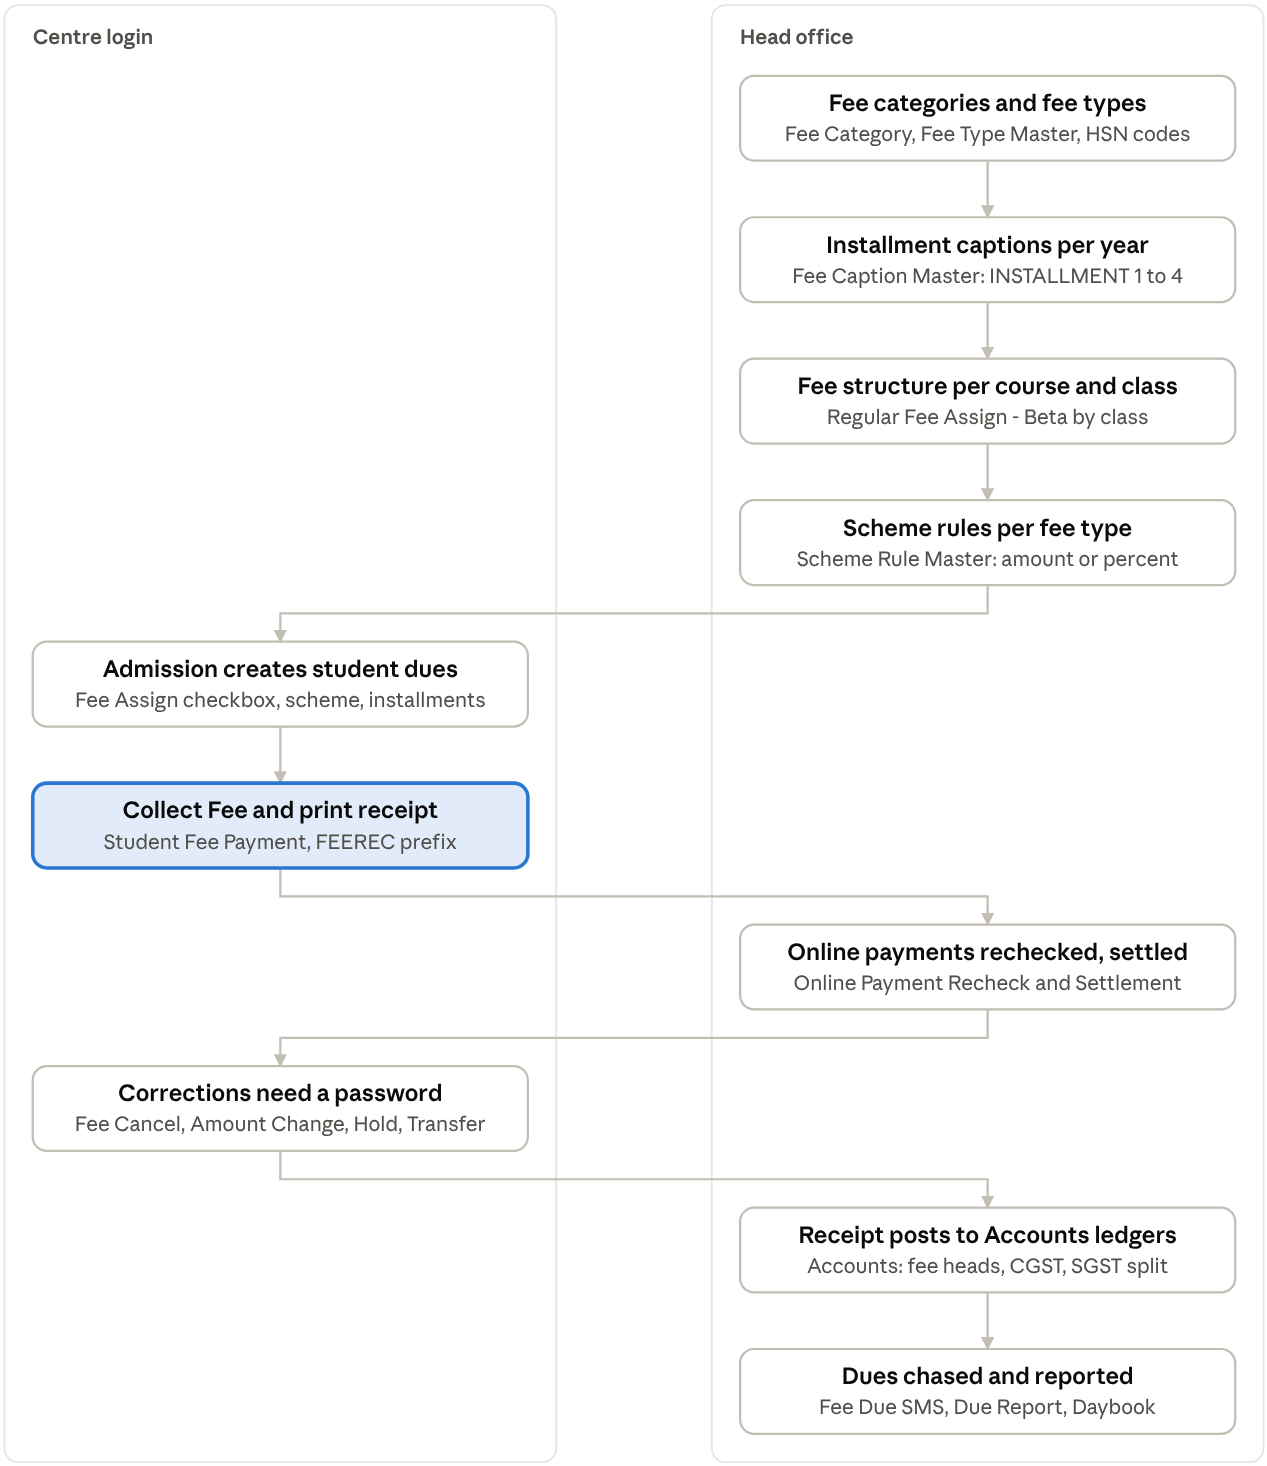

Questions for managers:

- [ ] Who creates centres today and who checks the agreement, royalty and GST details before the login is sent?
- [ ] Is the centre class tier (METRO, A++, A+, A, B, C and the overseas classes) decided at creation or revised later, and by whom?
- [ ] What must a centre finish on its side (QR code, bank, staff, batches) before it is allowed to admit students?

4. Fee setup and fee collection

Fee masters live at head office and are versioned by academic year: fee categories, fee types with HSN codes and order, installment captions, and a fee structure per course that is assigned to whole centre classes at once with Regular Fee Assign - Beta. At the centre, saving an admission with the Fee Assign box ticked creates the student's dues, which are then settled on the Collect Fee screen with a FEEREC-prefixed receipt. Every correction after a receipt exists (cancel, amount change, hold, transfer between students) is behind an access password, and each receipt posts into the Accounts sub-application against its fee head with the CGST and SGST split.

Fees are assigned from HO masters and collected at the centre against dues

fee setup and collection · 10 steps

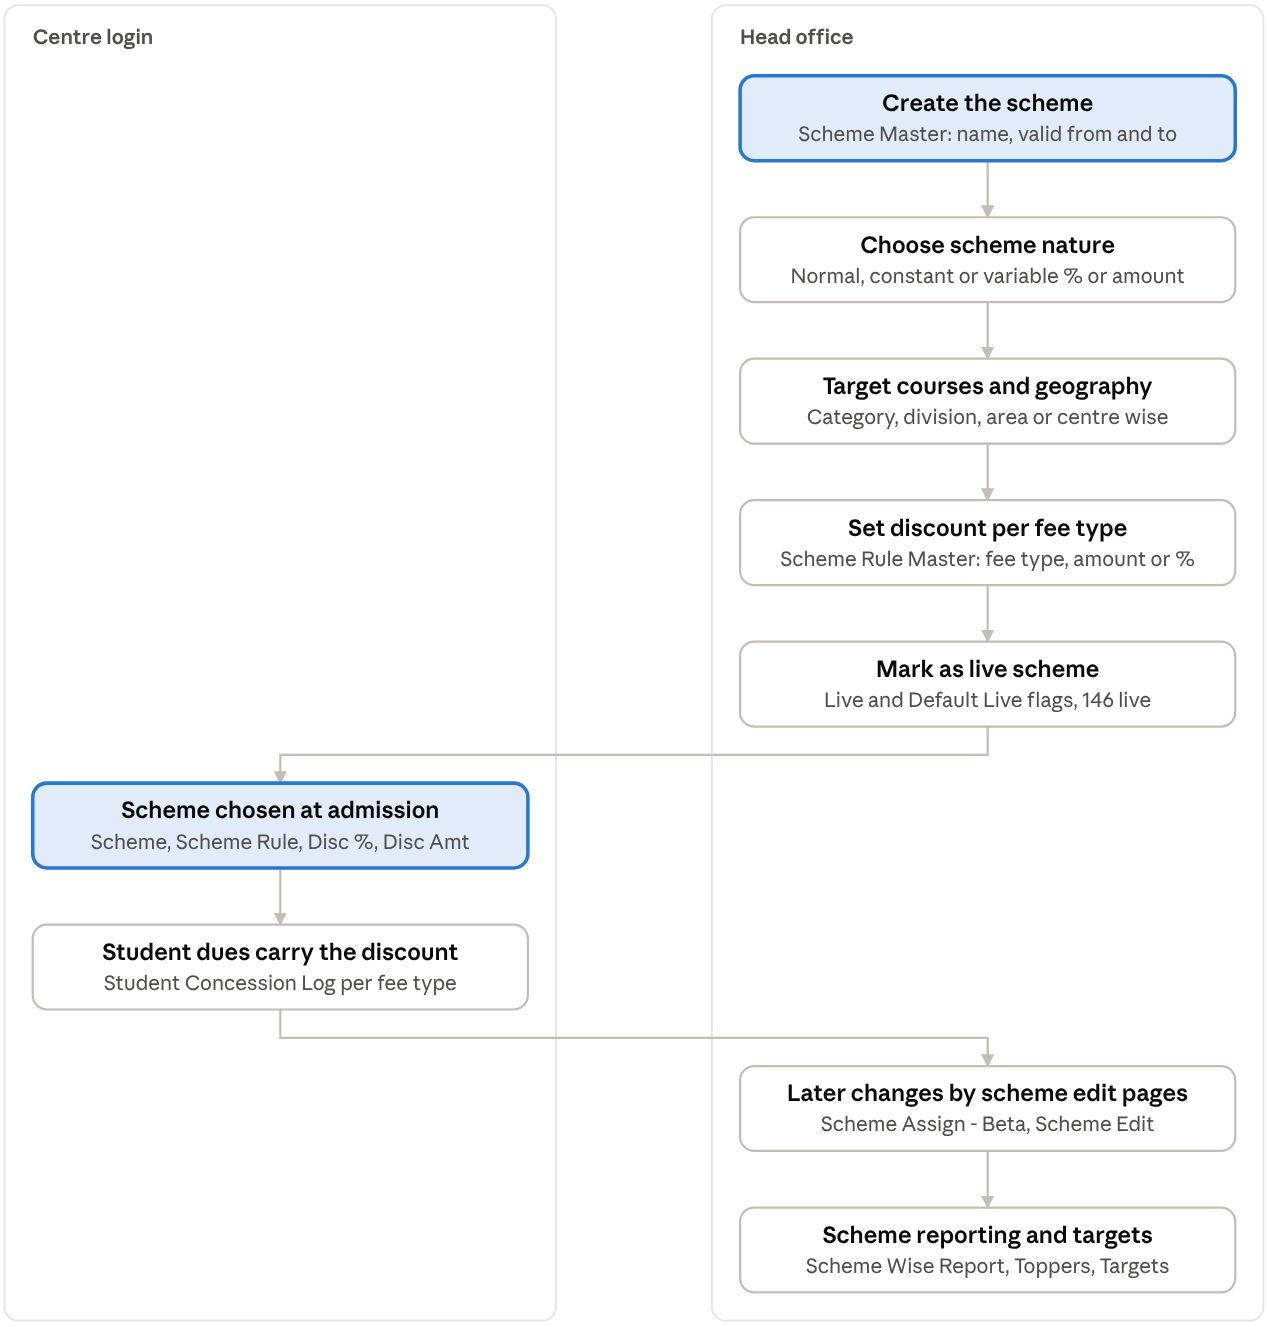

Questions for managers:

- [ ] Does any centre collect a fee that is not first assigned as a due (walk-in misc fees), and should the new ERP allow that?
- [ ] Who holds the access password for fee cancellation and amount change, and should those become approval tickets instead?
- [ ] Which payment modes are really used at centres (cash, UPI, card, gateway), and which gateway (Worldline, Traknpay, BillDesk) is live?

5. Schemes and concessions

A scheme is G-TEC's discount campaign (Freedom Offer, JOSH 2026, GZOOM 2026, college tie-up schemes and so on). Head office creates it with a validity window and a nature (normal, constant or variable, percentage or amount), targets it at course categories, divisions, areas or named centres, and then writes a Scheme Rule per fee type that says how much comes off. 242 schemes exist and 146 are live. At admission the centre picks the scheme and the discount flows into the student's dues; changing it afterwards is done on the Scheme Assign and Scheme Edit pages or through a Course Scheme Change ticket.

A scheme is a dated discount rule HO targets at courses, areas or centres

schemes and concessions · 9 steps

Questions for managers:

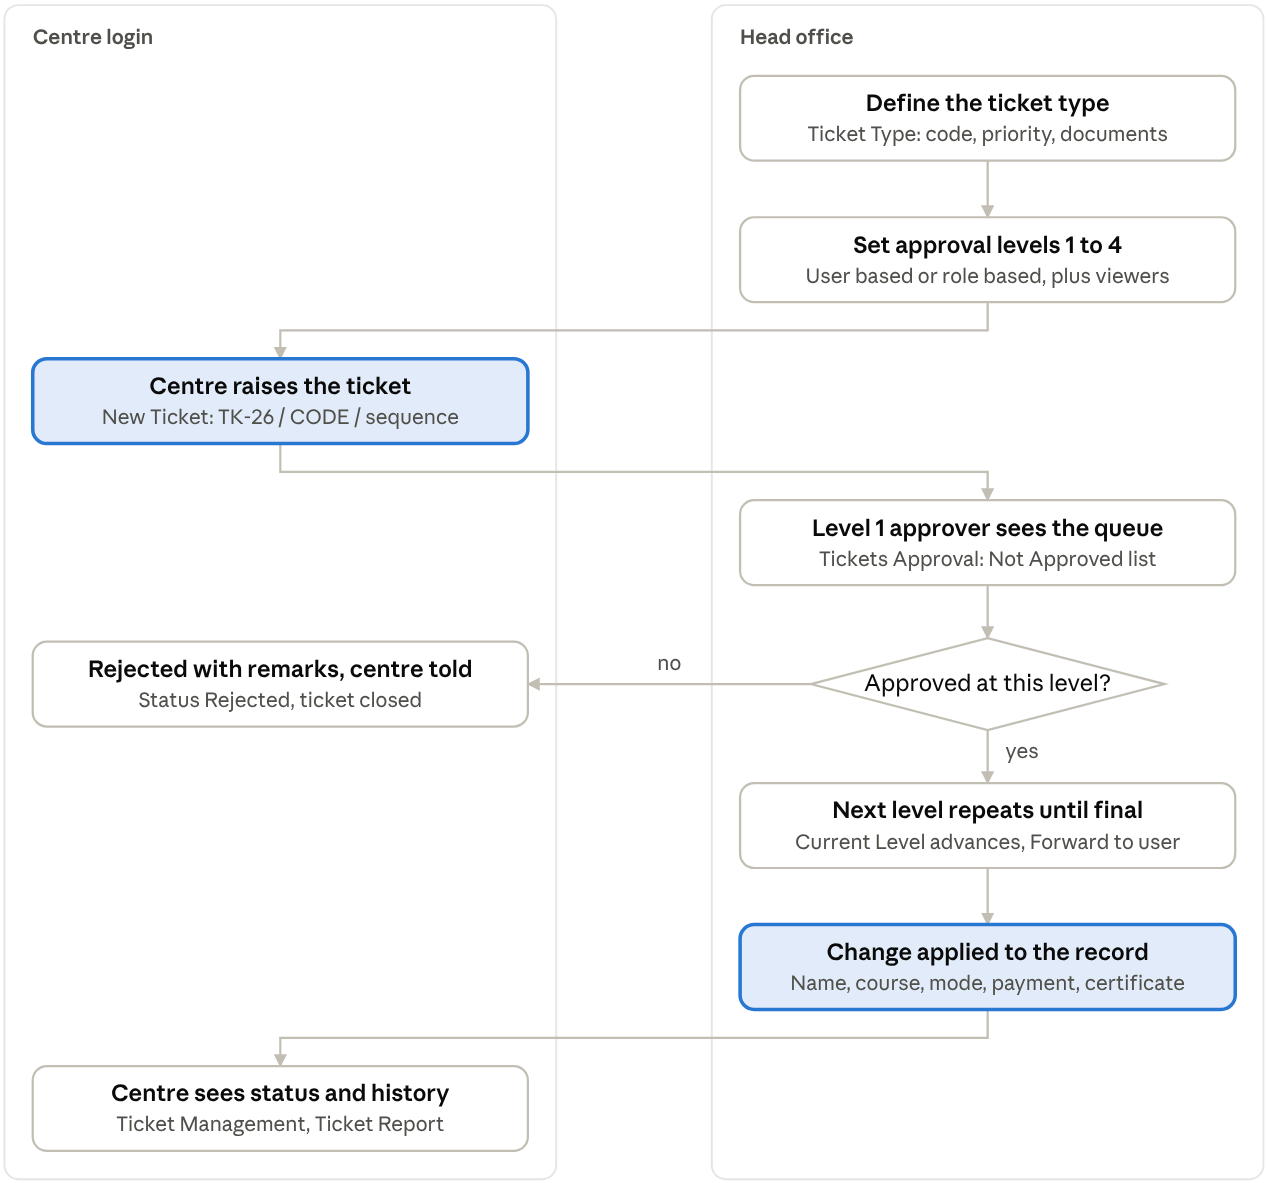

- [ ] Who may create a scheme and who signs off the discount before it goes live? Should centres be able to propose schemes?
- [ ] Can a student carry more than one scheme, and what happens to the discount when the course is changed?

- [ ] Should expired schemes stay selectable for old admissions, and how should scheme targets (Marketing) tie back to admissions?

6. Generic ticket approval engine

One engine sits under most of GEMS: a Ticket Type defines a code, priority, whether a document is mandatory and up to four approval levels, each tied to a named user or a role, plus viewers who can see but not act. A centre raises a ticket numbered prefix, type code, sequence (for example TK-26/CMC/23642) and it appears in the Tickets Approval queue of the level 1 approver, who can approve, reject with remarks or forward it to another employee. When the last level approves, the system applies the change itself. 31 ticket types exist today and 16,542 tickets have been raised, of which 2,412 are pending.

Every centre request becomes a numbered ticket that climbs approval levels

ticket approval engine · 7 steps, 1 decision

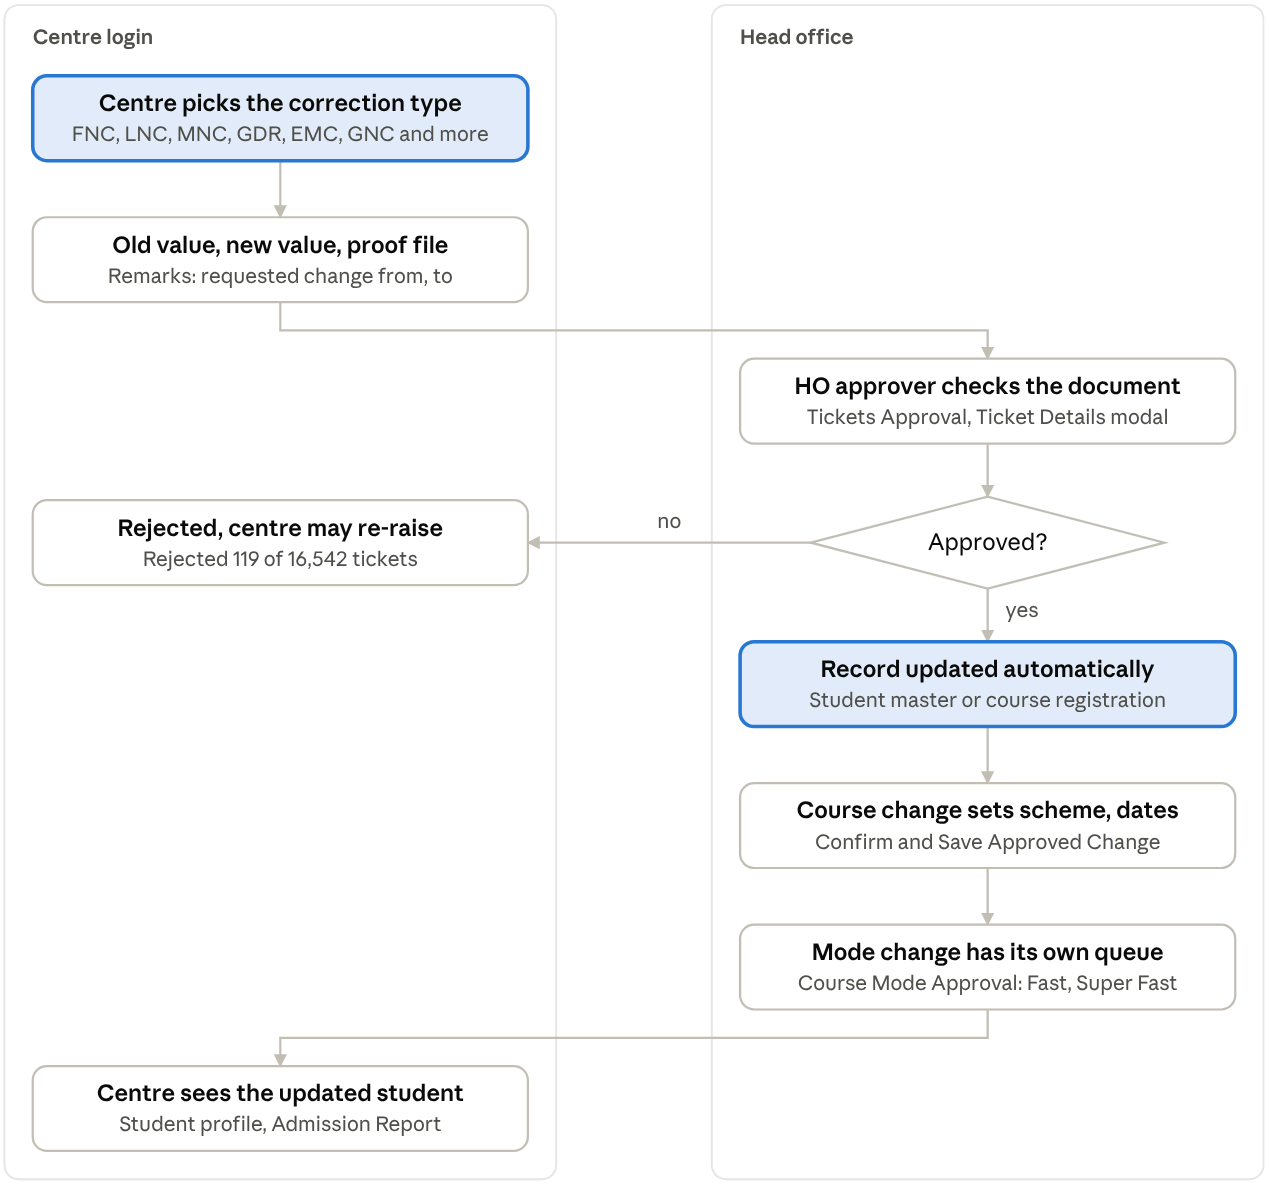

Questions for managers:

- [ ] For each ticket type, who is the level 1 approver today (PRO, ASO, RSO, Certification, Accounts) and how many levels are really used?
- [ ] Should a rejected ticket be re-openable by the centre, or must a new ticket be raised?
- [ ] Is there a target turnaround for approvals, and should the new ERP escalate or remind approvers automatically?

7. Student data and course change tickets

The most used ticket types are corrections to a student record: first name, last name, mobile, guardian phone, SMS number, gender, email and guardian name each have their own code, and so do Course Change, Course Scheme Change and Course Mode Change. The centre states the old and new value and uploads proof; head office checks it and approves or rejects; the record is then rewritten by the system, not by hand. A Course Change approval additionally asks the approver to set the target scheme, scheme rule, join date and calculated end date. Course mode changes (Normal, Fast Track, Super Fast Track) have a separate approval page with 1,680 requests to date.

Student corrections are never edited directly, they go through typed tickets

student correction tickets · 7 steps, 1 decision

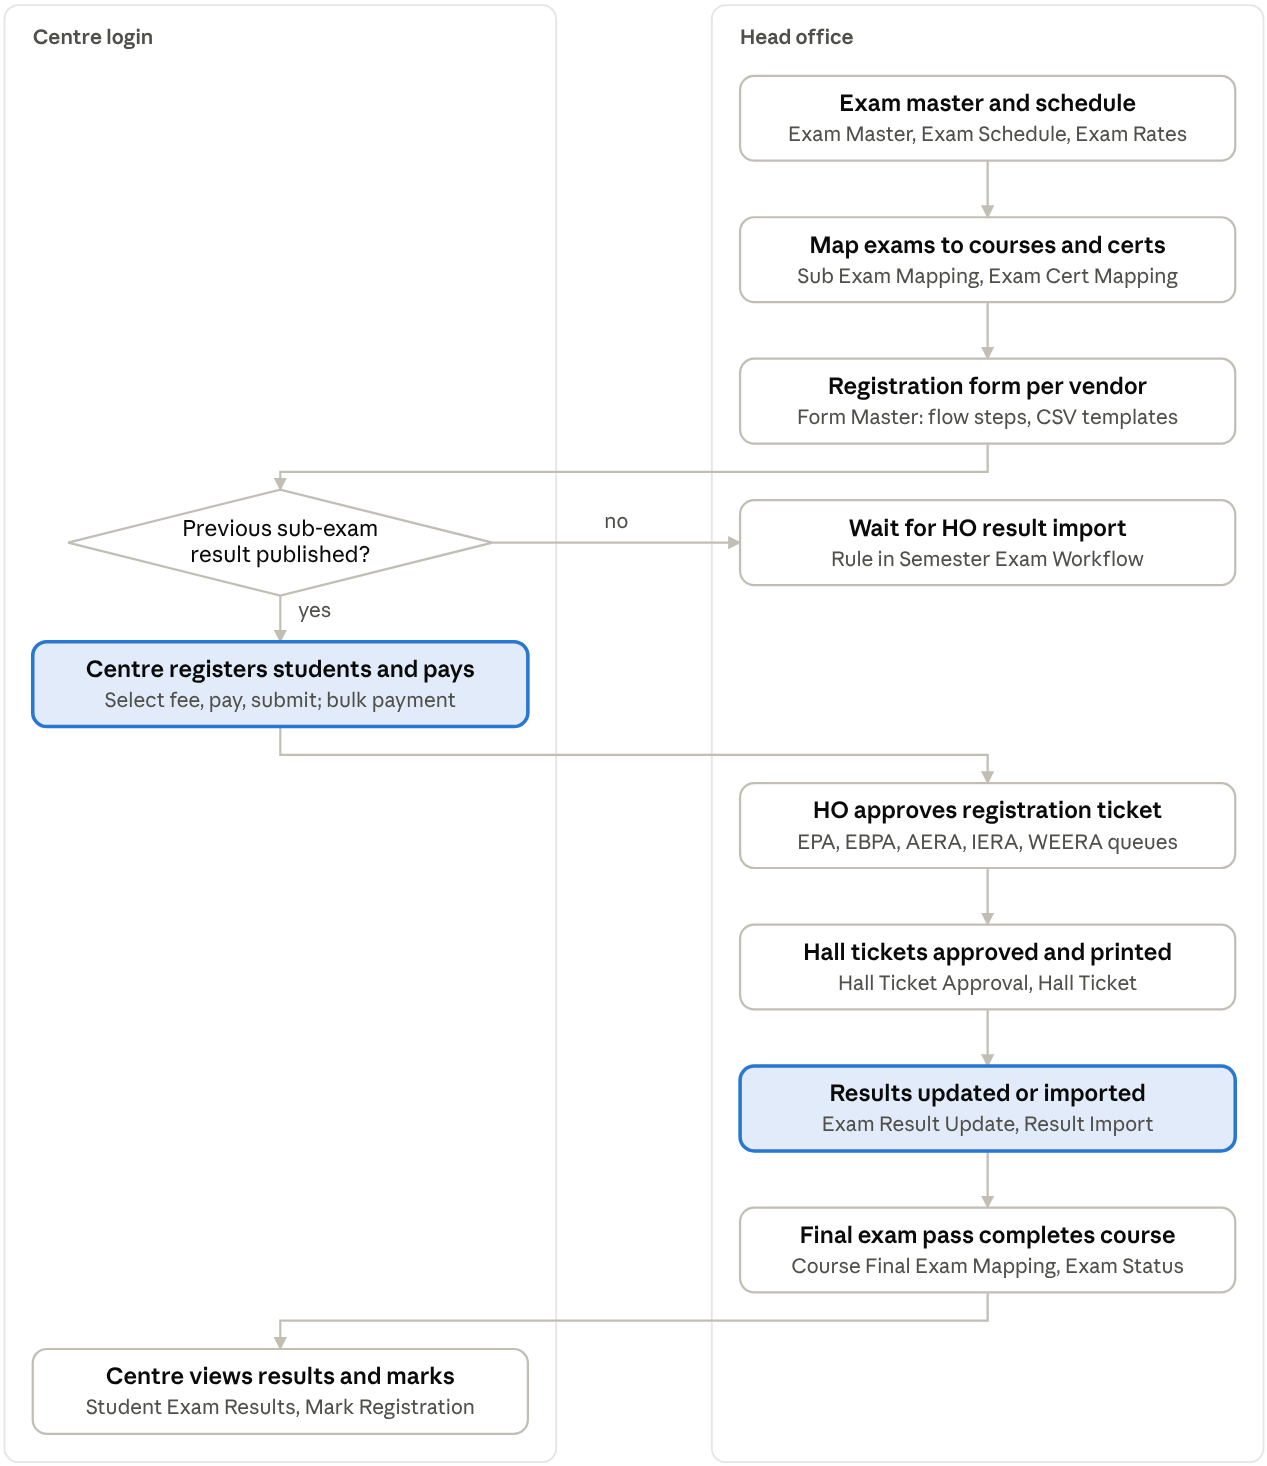

Questions for managers:

- [ ] Which student fields may a centre edit freely and which must always go through a ticket? Is the current split right?
- [ ] On a course change, what happens to fees already paid and to the old course registration (status Course Change is excluded from reports today)?
- [ ] Should mode change and scheme change stay separate approval queues or merge into the general ticket queue?

8. Exam lifecycle (Semester, IAB and vendor exams)

Head office defines each exam (main or sub exam, fee, processing fee, weekday or Saturday schedule), maps sub exams to courses and exams to certification bodies, and publishes a schedule with registration, notification and last-payment windows that appear as dashboard notices at every centre. A Registration Form Master per vendor switches on which of the four flow steps apply (schedule, registration, payment approval, result upload) and carries the CSV templates. The centre registers students and pays, head office approves the registration through a ticket queue (EPA, bulk payment EBPA, absent re-exam AERA, internship IERA, women empowerment WEERA), hall tickets are approved and printed, and results are updated one by one or imported from a sheet. Passing the mapped final main exam is what marks the course complete.

An exam runs from HO mapping to centre registration, HO approval and results

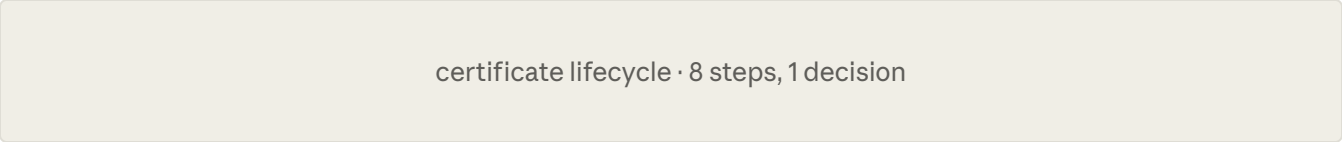

exam lifecycle · 9 steps, 1 decision

Questions for managers:

- [ ] Which exams are conducted by G-TEC itself (G-TEC Online, SEM, VIVA) and which by vendors (Tally, SAP, Certiport, IAB, Keltron)? Does the flow differ for each?
- [ ] Is the rule that the previous sub-exam result must be published before the next registration applied to all exams or only semester exams?
- [ ] Who enters results today (HO Certification team, centre, vendor file) and should results be allowed to change after publication?

9. Certificate lifecycle

After the final exam is passed the centre raises a Course Completion Certificate Request (or an Internship Certificate Request). The Certification team's approval page shows the student's exam result and a Fee Due link, so dues and results are checked before approval. The certificate is then issued with a G-prefixed number, printed from the Certificate Type template, validated, despatched by courier with a tracking number, and finally marked Received at the centre. Despatch cost is paid by the centre and approved on a separate page. Every state change is written to the Certificate Log Report, and the Edit Certificate page allows name, course, grade and date corrections with a live print preview.

Questions for managers:

- [ ] Is the certificate printed only at head office, or do centres print some types (workshop, participation) themselves?
- [ ] What does Validated mean in practice, who does it, and is it a required step before despatch?
- [ ] Should the student get a digital copy or a public verification link, and who may edit a certificate after it is issued?

10. Voucher and licence supply

Vouchers (Certiport, ITS, MOS, ACP, QuickBooks) and licences (Tally, SAP, Zoho) are the same flow with two dashboards. Head office keeps vendor and rate masters, where a rate can differ by buyer type (ASO, RSO, student, centre, bulk college) and by quantity slab, and imports the vendor's code list into stock. A centre orders a quantity, pays, and raises a

Voucher Payment Approval ticket; once approved, head office issues specific codes with expiry dates against the order. The centre then assigns a code to a named student with ID proof details, the student registers with the vendor (exam link, Tally registration), and head office records the registration status through a Voucher Registration Approval ticket.

voucher and licence supply · 9 steps

Questions for managers:

- [ ] Does a centre pay before or after codes are issued, and can a centre hold unassigned stock?
- [ ] Which vendors still need the separate Tally Registration and Exam Link Request steps, and could the vendor registration be automated?
- [ ] Who changes an order's certification after issue (Edit Order Certification page) and why does that happen?

11. Material kits and products

The Material and Product dashboard is a small supply chain. Head office keeps a product master (course, administrative, promotional, scheme and complementary materials with stock levels and photos), material types (academic kit, welcome kit, scheme kit, initial kit) and a kit composition per course with a student rate and a centre rate. A centre fills a cart and places an order with courier charges, enters its payment details, and the payment is approved through a Material Payment Approval ticket. Head office then issues the items from stock, despatches them, and the centre confirms receipt. Every step is written to the Material Log with the action types CREATE ORDER, CREATE PAYMENT, ORDER PAYMENT APPROVED, ORDER ISSUED, ORDER DISPATCHED and DISPATCH SHIPMENT RECEIVED.

material kits and products · 9 steps, 1 decision

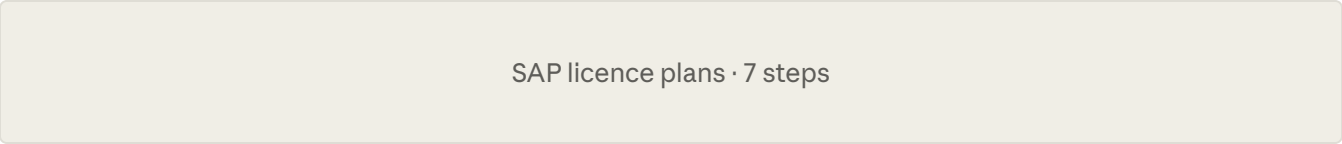

Questions for managers:

- [ ] Are kits charged to the student as a fee type (Academic Kit, Welcome Kit) and to the centre as a purchase, and do both have to match?

- [ ] Who manages physical stock and reorder levels at head office, and is damaged stock tracked?
- [ ] Is the separate Purchase Dept. (Gesta ERP) application still used, or should purchasing live inside the new ERP?

12. SAP licence plans

SAP is handled as a plan rather than a voucher. Head office defines plans (for example SAP Power User - FICO L3) with a code, version, validity and the certifications included, sets a rate per buyer type (ASO, RSO, student, centre) with a licence count, amount and carry-forward flag, and records its own purchases from SAP. A centre orders licences against a plan and pays; head office approves the payment and issues the licences, and the SAP Stock Report reconciles purchased, issued and remaining counts.

Questions for managers:

- [ ] What does Carry Forward mean on a SAP rate: unused licences roll to the next plan period, or to the next order?
- [ ] Is a licence tied to a named student after issue (as vouchers are), or does the centre hold a pool?
- [ ] Should SAP, vouchers and licences become one supply module in the new ERP with vendor-specific settings?

13. Royalty and clearance certificate

Franchise centres owe head office a royalty on what they collect. The Royalty Master holds a single 20 percent rate and the GST Master 18 percent; the Royalty Fee Collection report computes, per centre and month, old and new collection, royalty amount, tax and a payment status. The centre pays the month's royalty and head office approves it on the Royalty Payment Approval List. A Clearance Request for the month then moves through an approval stage and ends in a clearance certificate, whose text is a Certificate Type with content type Clearance Certificate. The same certificate types also carry an Income Tax Certificate.

royalty and clearance · 6 steps, 1 decision

Questions for managers:

- [ ] Is royalty always 20 percent of collection for every centre, or do agreements differ by centre class or region?
- [ ] What is Old Collection versus New Collection in the royalty report, and which fee types are royalty-bearing (the Fee Type Master has a royalty flag)?
- [ ] What does the clearance certificate entitle the centre to (exam registration, certificates, renewal), and what is blocked without it?

14. Academic and financial year closing with promotion

GEMS keeps an academic year (2025-2026) and a financial year (2026-2027) side by side, and the Financial Year Management page is literally a checklist: create the academic year, arrange classes by promotion order and set the last class, promote students, post the previous year's balance dues into the new year, then set or copy the accounts prefixes (ADMREC, FEEREC, INV, JOU, REC, VOU, CON) so receipt numbering restarts. The closing itself is password protected and can be reversed from the Academic Calendar page. Promotion and depromotion are school-ERP features; for G-TEC's course-based students, depromotion is listed per course across 1,375 rows, which suggests the step is rarely used as designed.

year closing and promotion · 8 steps, 1 loop

Questions for managers:

- [ ] Does G-TEC actually promote students between years, or does a course registration simply continue until completion? Can this step be dropped?
- [ ] Who runs the year closing and when, and what has gone wrong in past closings (locked receipts, wrong prefixes, dues lost)?
- [ ] Should the new ERP keep separate academic and financial years, or drive everything from the financial year plus the course join date?

15. Attendance, syllabus coverage and placement

Delivery tracking is almost entirely centre-side. Head office defines the modules (376 subjects) and syllabus topics per course; the centre creates batches with time slots, assigns faculty to modules by weekday and fixed hour, marks attendance per session and records which topics were covered. Head office reads the Attendance Coverage and dashboard reports. Placement is a flag per student (placement required yes or no) followed by a Placement List entry with company, address, salary details and status. Student feedback on faculty and infrastructure uses the Appraisal pages.

attendance, syllabus and placement · 9 steps

Questions for managers:

- [ ] Is attendance marked daily at centres today, and is it used for anything (exam eligibility, certificate, royalty)? If not, what should it drive?
- [ ] Do faculty need their own login (GCT certified trainers are tracked in HRMS), and should they mark attendance and syllabus themselves, including from a phone?
- [ ] Is placement tracked centrally for all courses or only for internship and job-oriented programmes?

16. College tie-up pricing approval

When a centre signs up a college for a batch, it records the tie-up with the college name, course, department, number of students and validity, and proposes a fee split across registration, course, voucher, academic kit, welcome kit, exam, exam processing, certification and university fees. Head office sees the proposed fee beside the actual course fee, can enter a suggested fee, and approves or rejects with remarks and a date. Approved tie-ups are then sold through a college tie-up scheme and, where the course is a special case, through Special Case - Assign Centre.

college tie-up approval · 6 steps, 1 decision

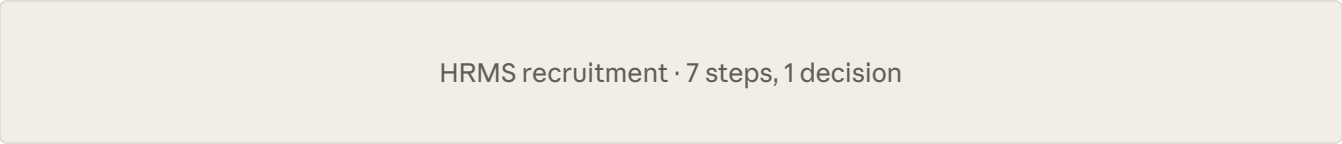

Questions for managers:

- [ ] Who approves tie-up pricing today (RM, GM, ED) and is there a floor price per course that the system should enforce?

- [ ] After approval, how does the tie-up become a scheme and a fee structure, and is that done by hand today?
- [ ] Should tie-ups also cover Keltron and internship programmes, which have their own flags on the course master?

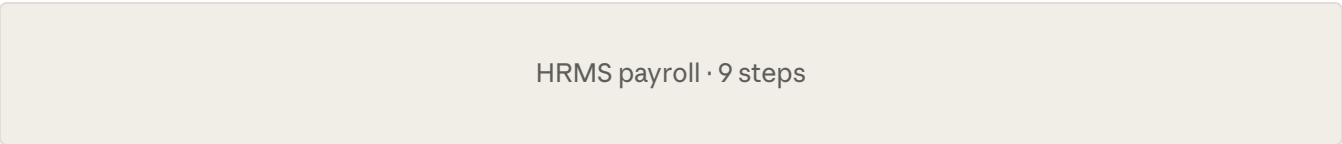

17. HRMS recruitment and payroll

HRMS is a separate application that shares the GEMS login, keyed by company and branch, and it holds the staff records that GEMS reads as Faculties. Two flows matter. Recruitment moves an application through approval, interview, written exam and demo, each with a mark and remark, to a Score List where the total is approved or rejected; an approved candidate becomes an employee with work details, G-TEC Certified Trainer levels, salary structure, bank and nominee details and a login.

HRMS recruitment · 7 steps, 1 decision

Payroll starts from the shift and pay structure, pulls biometric punches into the timesheet, completes the attendance register, applies approved leave and loss of pay, generates the month's payroll, finalizes and verifies it, issues payslips and produces the bank statement and payment sheet for transfer. Most HRMS masters at head office are empty, which suggests payroll is run elsewhere or per branch.

HRMS payroll · 9 steps

Questions for managers:

- [ ] Is HRMS used for head office staff only, for all centres, or not at all for payroll today? Which parts must the new ERP keep?
- [ ] Is the GCT (G-TEC Certified Trainer) record the master for who may teach a course division, and should course or batch assignment check it?
- [ ] Does any centre use biometric devices, and should staff attendance feed anything in GEMS (faculty assign, royalty, appraisal)?

18. Sign-off sheet

One row per workflow. The manager who owns the process writes their name, marks whether the diagram matches how the work is really done, and notes any correction. Rows marked Confirmed become the baseline for the new ERP; rows with corrections will be redrawn before build starts.

#	Workflow	Suggested owner	Manager name	Confirmed as drawn?	Corrections and comments
1	Enquiry to admission	Admissions / PRO			
2	Course catalogue and centre availability	Academics			
3	Centre onboarding	Operations			
4	Fee setup and fee collection	Accounts			
5	Schemes and concessions	Marketing / Accounts			
6	Generic ticket approval engine	Operations / PRO			
7	Student data and course change tickets	PRO			
8	Exam lifecycle	Certification / Academics			
9	Certificate lifecycle	Certification			
10	Voucher and licence supply	Tech Support (Tally, SAP, Certiport)			
11	Material kits and products	Material / Stores			
12	SAP licence plans	Tech Support SAP			
13	Royalty and clearance certificate	Accounts			
14	Year closing and promotion	Accounts / IT			
15	Attendance, syllabus and placement	Academics / Placement			
16	College tie-up pricing approval	Regional managers			

#	Workflow	Suggested owner	Manager name	Confirmed as drawn?	Corrections and comments
17a	HRMS recruitment	HR			
17b	HRMS payroll	HR / Accounts			

Missing workflows: if a manager runs a process that is not drawn here (for example BDO activity planning, ID card generation, SMS and push notifications, or the CRM lead pipeline), please add a row with its name and the pages used, and it will be drawn in the next revision.
